

Dr. Diana Mason

Brown bag lunch presentation:

“Memorization is not a bad word!”

Wednesday, April 22nd

Meramec-Gasconade Room,
Havener Center

12:00pm - 1:00pm

The NSA (Networking for Science Advancement) team needed to rethink their educational approaches with young students. What students can do without using calculators, separates those who are successful from those who are not (grades of D, F, and W). The same result has been observed in organic chemistry, graduate-level business courses, and in general chemistry in other states and countries! Is there something that can be done to help young students? Yes!

*Lunch not provided—please bring your own!

Professor Emerita Diana Mason retired from her position as the Director of the Chemistry Education Program at the University of North Texas (UNT) in August 2012 after over 30 years of teaching chemistry at high school, college and university levels. She is a Fellow of the American Chemical Society. In 2016 she was commissioned by Governor Abbott as an Admiral in the Texas Navy.
