

# Morality of Artificial Intelligence

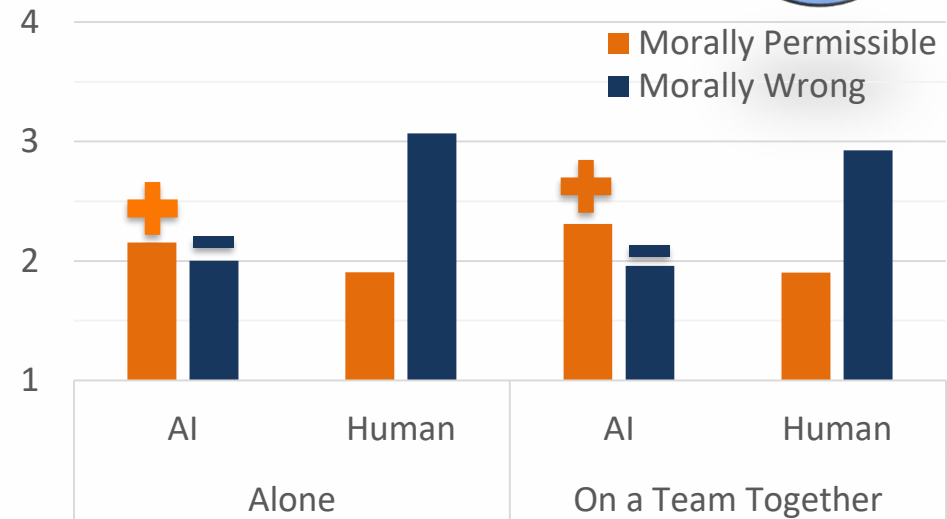

## Do people perceive morality for AIs like humans?

For the exact same behaviors, people perceive that it is less wrong and more morally permissible for an AI than a human. This is true when the AI and human are working alone or together (figure).

## How much mind to people judge AIs to possess?

## How to people allow AIs to advise them?

## Do humans and AIs on teams change the perception and judgments about that team?
